

Workflow Assessment

Prepared for Harbourline Heating & Cooling

Assessment Date: September 12, 2026

Financial Impact

Weekly Office Time Returned 6 hrs	Plan Revenue Protected Yearly \$6,000
---	---

Most fixes use tools already in place. New monthly cost is limited to a missed-call text-back feature (price needs verification).

Executive Summary

Pain

Missed calls at peak times, repeated "where's my technician" calls, and invoices typed twice are consuming office time and letting urgent callers slip away, in a business with a loyal maintenance-plan base and a scheduling system the team already knows.

Outcome

Turning on features of the existing stack and repairing one broken integration can return **about 6 office hours per week** and stop maintenance-plan renewals from lapsing, without a platform migration.

The Opportunity at a Glance

6

Hours You Can Reclaim Weekly

PRIMARY FOCUS: TIME SAVINGS

What We Heard

P1

Missed calls at peak times

“People calling about a no-heat don't leave voicemails, they call the next company.”

P2

Technician status calls

“Ten, fifteen calls a day in the busy season... It's the same loop every time.”

P3

Invoices typed twice

“The sync was set up years ago and it broke and nobody fixed it. So everything gets typed twice.”

P4

Plan renewals lapsing

“We had a bunch of plans lapse last year because nobody reached out for the renewal.”

P5

Slow quotes, no follow-up

“Some quotes take two or three days to go out. We don't really follow up on them.”

P6

Manual Monday report

"Takes him most of the morning. I'd want it quicker, not fancier."

Impact-Effort Matrix

Your pain points have been analyzed and placed into four quadrants based on their business impact and implementation effort.

Recommended Solutions

1

TOP 3 PRIORITY

Automatic "On My Way" and Visit Reminder Texts

Recommended Tool: Scheduling tool notifications (existing)

Why This Fits: Customers get the update before they think to call. The office stops relaying messages between customers and technicians who are mid-job.

Complexity: plug-and-play

Monthly Cost: \$0 if included in current plan

Setup Time: 1 to 2 hours

Time Saved: About 2 office hours per week

Addresses: P2

Cost source: needs verification

Repair the Scheduling-to-Accounting Sync

Recommended Tool: Existing Jobber to QuickBooks Online integration

Why This Fits: Invoices flow to accounting automatically, which removes the daily re-entry and the month-end mismatches it causes.

Complexity: some-setup

Monthly Cost: \$0 (existing integration)

Setup Time: Half a day, including one week of reconciliation checks

Time Saved: About 4 office hours per week

Addresses: P3

Cost source: needs verification

Missed-Call Text-Back

Recommended Tool: Auto-reply feature from the business phone provider

Why This Fits: Every unanswered caller gets an instant text with a booking link, so urgent callers have a reason to wait instead of calling a competitor.

Complexity: plug-and-play

Monthly Cost: Varies by provider

Setup Time: 2 to 3 hours

Time Saved: Recovers callers who would otherwise hang up

Addresses: P1

Cost source: needs verification

Maintenance Plans as Recurring Jobs

Recommended Tool: Recurring jobs and automated reminders in the scheduling tool

Why This Fits: Moving plans out of the spreadsheet means tune-ups and renewals are scheduled and reminded automatically, even in the busiest weeks.

Complexity: project

Monthly Cost: \$0 if included in current plan

Setup Time: 2 to 3 days to migrate about 350 plans

Time Saved: Protects about \$6,000 a year in plan revenue

Addresses: P4

Cost source: needs verification

Same-Day Quotes with Automatic Follow-Up

Recommended Tool: Quote templates on a tablet plus automatic quote follow-ups

Why This Fits: Quotes go out from the driveway instead of the kitchen table, and follow-ups happen without anyone remembering to send them.

Complexity: some-setup

Monthly Cost: \$0 if included in current plan

Setup Time: 1 to 2 days to build templates

Time Saved: Quotes out the same day

Addresses: P5

Cost source: needs verification

4-Day Quick Wins Plan

1

Day 1

Task: Turn on visit reminders and "on my way" texts

Tool: Scheduling tool

2

Day 2

Task: Set up missed-call text-back with a booking link

Tool: Phone provider

3

Day 3

Task: Repair the accounting sync and start reconciliation checks

Tool: Jobber + QuickBooks Online

4

Day 4

Task: Build install quote templates and turn on quote follow-ups

Tool: Scheduling tool

What Comes After Quick Wins

01

Migrate maintenance plans into **recurring jobs** before the next renewal cycle

02

Replace the Monday spreadsheet with a **saved report** in the scheduling tool

03

Review after one busy-season month: **missed calls, status calls, sync errors**

Assumptions & Sources

- Status calls: 12 per day at about 4 minutes each over 5 days is about 4 hours per week; automated texts are assumed to remove half.
 - Double entry: the owner's estimate of about 1 hour per day; a working sync is assumed to remove most of it.
 - Lapsed plans: the operations manager's estimate of about 30 plans at about \$200 per year each.
 - Missed calls: the share of the roughly 40 weekly missed calls that were new customers is unknown, so no revenue is claimed for recommendation 3.
 - Feature availability depends on the current plan tier of each tool and has not been verified in this sample run.
-
